

GREEN JEWEL®

FOR BOTANIC GARDENING

DIATOMACEOUS EARTH

- *Natural Pesticide*
- *Food Grade DE*

GREEN JEWEL DIATOMACEOUS EARTH SPRAY is a natural mineral-based pest control solution made from Diatomaceous Earth (Amorphous Silicon Dioxide). This ready-to-use liquid formula provides an easy and convenient way to apply DE on plants, garden areas, and household spaces.

Diatomaceous Earth works mechanically by damaging and dehydrating pests with exoskeletons. It helps control common garden pests without relying on toxic chemical pesticides, making it suitable for use around plants and growing areas.

This product can be applied on plant surfaces, garden beds, potted plants, and compost areas. It is also safe to use in worm compost bins as it does not harm earthworms when used as directed.

When applied to soil surfaces, the natural DE particles can also provide minor support to soil aeration and drainage, helping maintain a healthier growing environment for plants.

Directions for Use

-  Shake bottle before use
-  Do not water immediately after application
-  Spray directly onto pests and affected areas.
-  Apply once a week
-  Do not apply under hot sun

Ready-To-Spray Method Guide

DE works best when dry. Apply as a spray for easy coverage. Once the water evaporates, a fine layer of DE remains on the surface to help control pests.
